

How to define the exact POSP model?

1. POSP scopes are made with AK side mount, SVD side mount and Weaver mount. The difference is in bottom mount design.

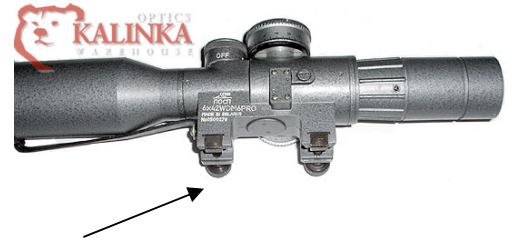

AK

SVD

Weaver

6. How to define the POSP scope model. All above mentioned scope modifications could be defined by reading the title on the scope product plate. The title ALWAYS has scope model (like 4x24, 8x42, 3-9x42 etc.) description, mark of independent focus (D or Д), mark of PRO version (PRO). If the scope is AK version, it has B symbol in the title, W symbol – for Weaver version. SVD version is NOT marked.

For example:

ПОСП 4x24B – POSP 4x24, AK side mount

ПОСП 4x24 – POSP 4x24, SVD side mount

ПОСП 6x42ВД – POSP 6x42, AK side mount, independent focus

ПОСП 6x42WD – POSP 6x42, Weaver mount, independent focus

ПОСП 6x42 Д PRO – POSP 6x42, SVD side mount, independent focus, PRO version

ПОСП 6x42WD M6 PRO – POSP 6x42, Weaver mount, independent focus, PRO version, Mil-Dot reticle

ПОСП 2-6x24 – POSP 2-6x24, SVD side mount

As said, Mil-Dot reticle specially marked M6. Other reticles (400 m or 1000 m) are not marked in the scope title except POSP 4x24 scopes where M symbol means 1000 m reticle installed, no symbol means 400 m reticles. So possible marks for POSP 4x24 are:

ПОСП 4x24B – POSP 4x24, AK side mount, 400 m reticle

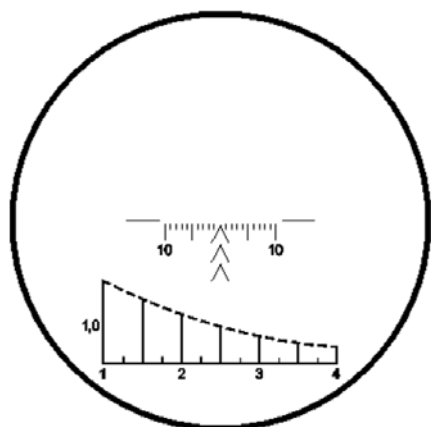

ПОСП 4x24 – POSP 4x24, SVD side mount, 400 m reticle

ПОСП 4x24BM – POSP 4x24, AK side mount, 1000 m reticle

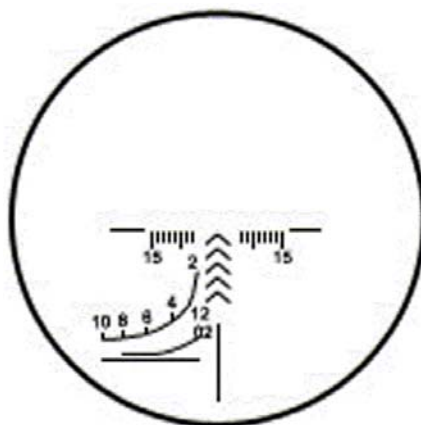

ПОСП 4x24 M – POSP 4x24, SVD side mount, 1000 m reticle

The common types of reticle are:

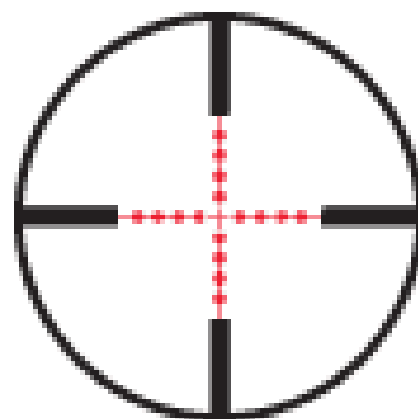

400 m

1000 m

Mil-Dot
